(1

Date: Day:

Cout Practice

Question #1

Print the following Statements:
welcome to C++ Programming.

Code:

```
#include<iostream>
using namespace std;
int main(){
desire output // Cout<<"welcome to C++ Programming";
return 0;
}
```

output : welcome to C++ Programming

Question #2

Print the given sentences on the screen:
print name and age on seperate lines:

Code:

```
#include<iostream>
using namespace std;
int main(){
Cout<<"My name is"<<"  "<<Muhammad Junaid<<endl;
Cout<<"My age is"<<"  "<<18<<"  "<<"years old";
return 0;
}
```

Date: Day:

Output:

My name is Muhammad Junaid.
My age is 19 years old.

Question #3

Print the following arithmetic result using Cout:

The sum of 8 and 12 is 20.

Code:

```
#include<iostream>
using namespace std;
int main(){
  // Here is my code
    Cout<<The sum of 8 and 12 is<<"  "<<8+12;
  return 0;
}
```

output:

The sum of 8 and 12 is 12

Question #4

Print the following rectangle of stars:

```
*****
*****
*****
*****
```

Date: Day:

Code:

```
#include<iostream>
using namespace std;
int main()
{
    cout << "*****"<<endl;
    cout << "*****"<<endl;
    cout<< "*****"<<endl;
    cout<<"*****";
return 0;
}
```

output:

```
*****
*****
*****
*****
```

Question #5

Print the given right-angled triangle using stars:

```
*
**
***
****
*****
```

Date:________ Day:________

Code:

```
#include<iostream>
using namespace std;
int main( )
{
   Cout<< "*" <<endl;
   Cout<<"**" <<endl;
   Cout<<"***" <<endl;
   Cout<<"****" <<endl;
   Cout<<"*****" <<endl;
return 0;
}
```

output:

```
*
**
***
****
*****
```

Question #6

Print your favourite quote using cout and make sure your quotion marks appears in output.

"Life is journey, not a race"

Date:________ Day:________

Code:

```
#include<iostream>
using namespace std;
int main( )
{

    Cout << " Life is Journey, Not a race";
    return 0;

}
```

output:

'Life is Journey, Not a race'

Question #7

Print the following Patterns of numbers:

1

12

123

1234

12345

Code:

The Code is written on next Page.

Date:______ Day:______

```
#include<iostream>
using namespace std;
int main()
{
  Cout "1"<<endl;
  Cout "12"<<endl;
  cout "123"<<endl;
  Cout "1234"<<endl,
  Cout "12345"endl;
return 0;
}
```

Output:

1

12

123

1234

12345

Question #8

Print the following output exactly same as show:

C++ > Java > Pyton

Date:

Day:

Code:

```
#include<iostream>
using namespace std;
int main()
{
Cout<<"C++>"<<"Java >"<<"python";
return 0;
}
```

Output:

C++>Java>Python

Question #9

Print the following square of numbers

123

123

123

Code:

```
#include<iostream>
using namespace std;
int main(){
Cout<< "123"<<endl<<"123"<<endl;
Cout<<"123";
return 0;
}
```

Date:________ Day:________

output:

```
123
123
123
```

Question #10

Print the given Shape

```
 **    **
*  **   *
*    *    *
 *      *
 *     *
   * *
    *
```

```
#include<iostream>
Using namespace std;
int main() {
Cout<<"**  "<<"  . . "<<"**"<<endl;
Cout<<"* . "<<" . "<<"**"<<" . . "<<"**"<<endl;
Cout<<"*"<<" . . . "<<"*"<<" . . "<<"*"<<endl;
Cout<<" . *"<<" . . . "<<"*"<<endl;
Cout<<" . . *"<<" . . o"<<"*"<<endl;
cout<<" . . . "<<"**"<<endl;
Cout<<" . . . "<<"*";
return 0; }
```

• Show space number

Date: ____________ Day: ____________

Name " " " Muhammad Junaid

Section " " "
V4

Course " " "
pf theroy

Assignment No " " "
1

Predict the output of Cout statements

(*) Question No 1:
Display the following line on the page?
Cout<<5+7;

Code:

output: 7

```
#include<iostream>
using namespace std;
int main() {
Cout << 5+7;
return 0;
}
```

(1)

Date: Day:

(+) Question No 2:

What will be output of following statement?

Cout<< 12-4+3;

Code:

```
#include<iostream>
using namespace std;
int main (){
Cout<< 12-4+3;
return 0;
}
```

output:

$\boxed{11}$

Question #3

Display the output:

Cout<<6*3;

```
#include<iostream>
using namespace std;
int main(){
Cout << 6*3;
return 0;
}
```

output : 18

Date: Day:

Question#5

Predict the output of given Statement

Cout << 10 % 4.

Code.

```
#include<iostream>
using namespace std;
int main() {
                                output: 2
Cout << 10 % 4;
return 0;

}
```

Question #6

Show the output of given Statement:

Cout << 4+6*2;

```
#include<iostream>
using namespace std;
int main() {
Cout<< 4+6*2; //first Solve * then +.
return 0;
}
```

output: 16

Date:________

Question #7

Day:________

Show the output of given Statement:

Cout<< (4+6) *2

Code:

```
#include<iostream>
using namespace std;
int main ()
{
  cout<<(4+6)*2;
  return 0;

}
```

output: 20

Question #8

Show the output:

Cout<< 20/6.

Code:

```
#include<iostream>
using namespace std;
int main() {

cout<< 20/6;

return 0;
}
```

output : 3

Date:______ **Question #9** Day:______

Show the output: Cout<< 9+3*2-4;

Code:

```
#include<iostream>
using namespace std;
int main () {
   Cout << 9+3*2-4;
   return 0;
   }
```

output: 11

Question #10

Show the output:

Cout<< (8+4) /3

Code:

```
#include<iostream>
using namespace std;
int main ( ) {

Cout << (8+4) /3; //first solve () then /.
return 0;

}
```

output: 4

Date: Activity: Cout Arithmetic output Day:

Question # 1

Show the output:

Cout << 5+2*3;

Code:

```
#include<iostream>
using namespace std;
int main () {
  Cout<<5+2*3;
  return 0;

}
```

output: 11

Question #2

Show the output:

Cout<< (5+2)*3;

Code:

```
#include<iostream>
using namespace std;
int main () {
Cout<< (5+2)*3;
return 0;

}
```

output: 21

Date: Day:

Question #3

Show the output:

Cout<< 20.0/6

Code:

```
#include<iostream>
using namespace std;
int main () {
  Cout<< 20.0/6;
  return 0;
}
```

output: 3.333

Question #4

Show the output:

Cout << 20/6

Code:

```
#include <iostream>
using namespace std;
int main () {
  Cout << 20/6;
  return 0;
}
```

output: 3

Date: Question #5 Day:

Show the output:

Cout<< 5+ 2/2;

Code:

```
#include <iostream>
using namespace std;
int main() {
  cout<< 5+2/2;
  return 0;
}
```

$\boxed{\text{output: 6}}$

Question #6

Show the output:

Cout << "Hello" + world"

Code:

```
#include<iostream>
using namespace std;
int main() {
cout<< ' "Hello"+ world" '; // Convert ACII to Binary
return 0;

}
```

$\boxed{\text{output: 1917061945}}$

Date: Question #7 Day:

Show the output:

Cout<< 10% 3*2

Code:

```
#include<iostream>
using namespace std;
int main() {
Cout<< 10% 3*2;
return 0;
}
```

output: 2

Question #8

Show the output:

Cout<< 3+4*2/2-1

Code:

```
#include<iostream>
using namespace std;
int main() {
Cout<< 3+4*2/2-1;
return 0;
}
```

output: 6

Question #9

Show the output:

Date:______ Day:______

Cout << 5 + 'A';

Code:

```
#include<iostream>
using namespace std;
int main() {
Cout<< 5+   'A';
return 0;
}
```

output 70

Question # 10

Show output:

Cout<< 'B' + 'C';

Code:

```
#include<iostream>
using namespace std;
int main()
{
Cout<< 'B'+'C';
return 0;

}
```

output: 133

Question # 11

Show output:

Date:______ Day:______

Cout<< "C++"<<5+5;

Code:

```
#include<iostream>
using namespace std;
int main() {
  cout<< "C++"<< 5+5;
  return 0;

}
```

output: C++10

Question #12

Show output:

Cout<< 7/2*3;

Code:

```
#include<iostream>
using namespace std;
int main() {
  Cout<< 7/2*3;
  return 0;

}
```

output: 9

Question #13

Show output:

Cout << 7/2.0*3

Date:_______ Day:_______

Code :

```
#include<iostream>
using namespace std;
int main() {
Cout<< 7/2.0*3;
return 0;
}
```

output: 10.5

Question #14

Show output:

Cout<<1+2<<3+4;

Code:

```
#include<iostream>
using namespace std;
int main() {
Cout << 1+2<< 3+4;
return 0;
}
```

output: 37

Question #15

Show output: Cout<<(2+3)*(5-2)/3

Code:

```
#include <iostream>
int main() {
std:: Cout << (2+3)*(5-2)/3;
return 0;
}
```

output: 5

Date:________ Activity #4 Day:________

write a program to calculate the Area of Circle:

Formula: Area = 3.14 * r * r

Code:

```
#include<iostream>
using namespace std;
int main()
{
float r, Area;
cin<<r;
Area = 3.14 * r *r;
cout << "Area" << " = "<< Area;
return 0;
}
```

Output:

r = 2;

Area = 3.14 * 2 * 2

Area = 12.56.

Question #2

write a C++ program to calculate the parimeter of rectangle:

Code:

Date:______ Day:______

```
#include<iostream>
using namespace std;
int main() {
int leng, width;
Cout<< "plz give length and width in
        integer value"<<endl;
Cin<< "Enter value of Length"<<endl;
Cin<< " enter value of width" <<endl;
int perimeter;
perimeter = 2*(leng * width);
Cout << "Length =" <<" " << leng<<endl;
Cout << "width =" << " " << width<<endl;
Cout << "Perimeter =" << " " << Perimeter;
return 0;
}
```

Question #3

write a C++ program to calculate Simple interest :

Code:

```
#include <iostream>
using namespace std;
int main()
```

Day:

```
{
    int prin , Rate , Time;
Cout << "Plz enter every value into integer type"<<endl;
Cin<< prin << Rate << Time ;
Cout << "value of Principle =" << " " <<prin<<endl;
Cout<< "value of Rate =" << " " <<Rate<< endl;
Cout<< "value of Time" << " = " << Rate<<endl;
int Simple-interest ;
 Simple-interest= (prin * Rate * Time) /100
 Cout << value of Simple interest" <<" = " <<Simple-interest;
return 0;
}
```

Question #4

write a program to Convert celcius to Fahrenhit:

Code:

```
#include< iostream >
using namespace std;
int main ( )
{
    int Celsius;
```

Date:_______ Day:_______

```
Cout << "plz enter the celsius temperature in integer type<<endl;
Cin<< celsius;
float farh;
farh = (celsius* 9/5) +32;

Cout << " Temperature in Celsius << " = " << celsius<<endl;
Cout<< " Temperature in Farhnit << " = <<farh<<endl;
return 0;
}
```

Question #5

(A) write a program to find average of three number:

Code:

```
#include<iostream>
using namespace std;
int main() {
int N1, N2, N3;
Cout <<"enter value of N1"<< endl;
Cin >> N1;
Cout >> "N1 = " << " " << N1 <<endl;
Cout << "enter value of N2"<< endl;
Cin>> N2;
Cout<<"N2 = " << " " << N2 <<endl;
```

Date:________ Day:________

```
Cout << "N3 value enter plz <<"="<<endl;
Cin>> N3;
Cout << "value of N3 =" << N3<<endl;
int avg ;
avg = N1+N2+N3;
avg = avg/3 . ;
Cout << "Avg of 3 Number is <<"="<<
avg<<end;
return 0;
}
```

Question #6

Q: write a program to calculate perimeter and area of triangle:

Code:

```
#include <iostream>
using namespace std;
int main ()
{
    int perimeter;
    int length, width ;
Cout<< "works for perimeter" <<endl;
```

Date: Day:

```
Cout<< "plz enter the value of length and
        width in integer data type" <<endl;
Cin >> length;
Cout << "length = " << length<<endl;
Cin >> width;
Cout << "width = " << width<<endl;
perimeter = 2*(length * width);

Cout<<"Perimeter = " << perimeter <<endl;
Cout << " Now work for Area" <<endl;
  int base , height;
  float Area;
 Cout << "enter value of base and height
        in integer data type" << endl;
Cin>> base >> height;
Cout<< "Base" << " = " << base <<endl;
Cout << "height" << " = " << height << endl;
Area = 0.5 * base * height

Cout << Area =<<"=" <<Area;

return 0;

}
```

Date: Day:

Question # 7

4) write a C++ program to convert distance from kilometers to miles.

Code:

```
#include <iostream>
using namespace std;
int main()
{
Cout << "Give distance in kilometers" << endl;
int kilometers;
Cin >> kilometers;
Cout << "Distance in k.m" << "=" << kilometers <<
  endl;
float miles;
miles = kilometers * 0.621371;

Cout << "Distance in miles" << "=" << milies;
return 0;
}
```

Question # 8

Swap two variable value;

Date:________ Day:________

Code:

```
#include<iostream>
using namespace std;
int main( ) {
 int     n1, n2 ,n3;
cout << "enter  n1"<<endl;
cin >> n1 ;     // for example 10
cout << "enter  n2" <<endl;
cin >> n1 ; // for example S
n3 = n1 - n2;   //n3=5
n1 = n3;        // n1=5
cout << "n1 " << "=" << n1 <<endl;
n3 = n1 + n2    // n3 = 10
n2 = n3;        // n2 = 10
cout << "n2" << "=" << n2 <<endl;
return 0;
}
```

n1=10
n2=S
n3=S
n1=S
n2=S
10

Date:_______ Question #10 Day:_______

write a program for Perimeter and Area of square

Code:

```
#include <iostream>
using namespace std;
int main(){
int side_l;
Cout << "enter length of side" <<endl;
cin>> side_l;
Cout << "for Area" <<endl;
int Area;
Area = side_l * side_l;
Cout << "Area =" << Area <<endl;
Cout << "For Perimeter" <<endl;
int per;
per = 4* side_l;
Cout << "perimeter =" << per <<endl;
return 0;
}
```

Date:

Question #9

Day:

Slove the given expression:

$$ax^{12} + bx + c$$

Code:

```
#include <iostream>
Using namespace Std;
int main(){
int a , b, c, X;
Cout << "enter value of a" <<endl;
Cin >> a;
Cout << enter value of b" <<endl;
Cin>> b;
Cout << "enter value of c" <<endl;
Cin >> c ;
Cout << "enter value of x" <<endl;
Cin >> x;
float exp = (a(x *x)) +(b *x) +C;
cout << "expression slove=" << exp;
return 0;
}
```
